

Timer App

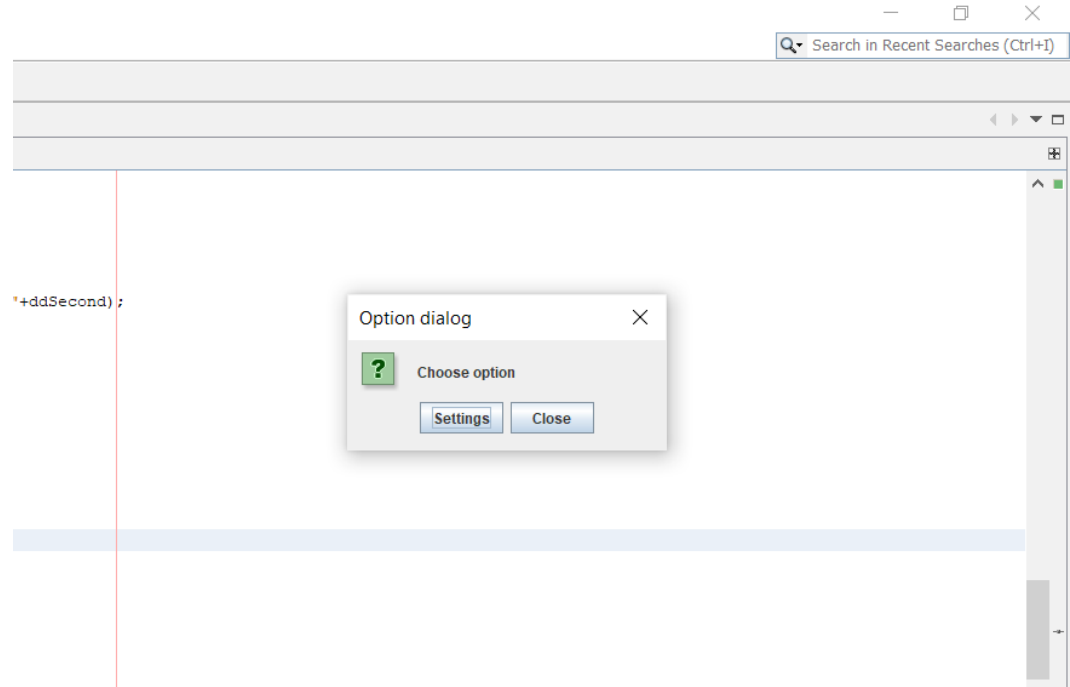

How it works ?

Step 1

Option dialog

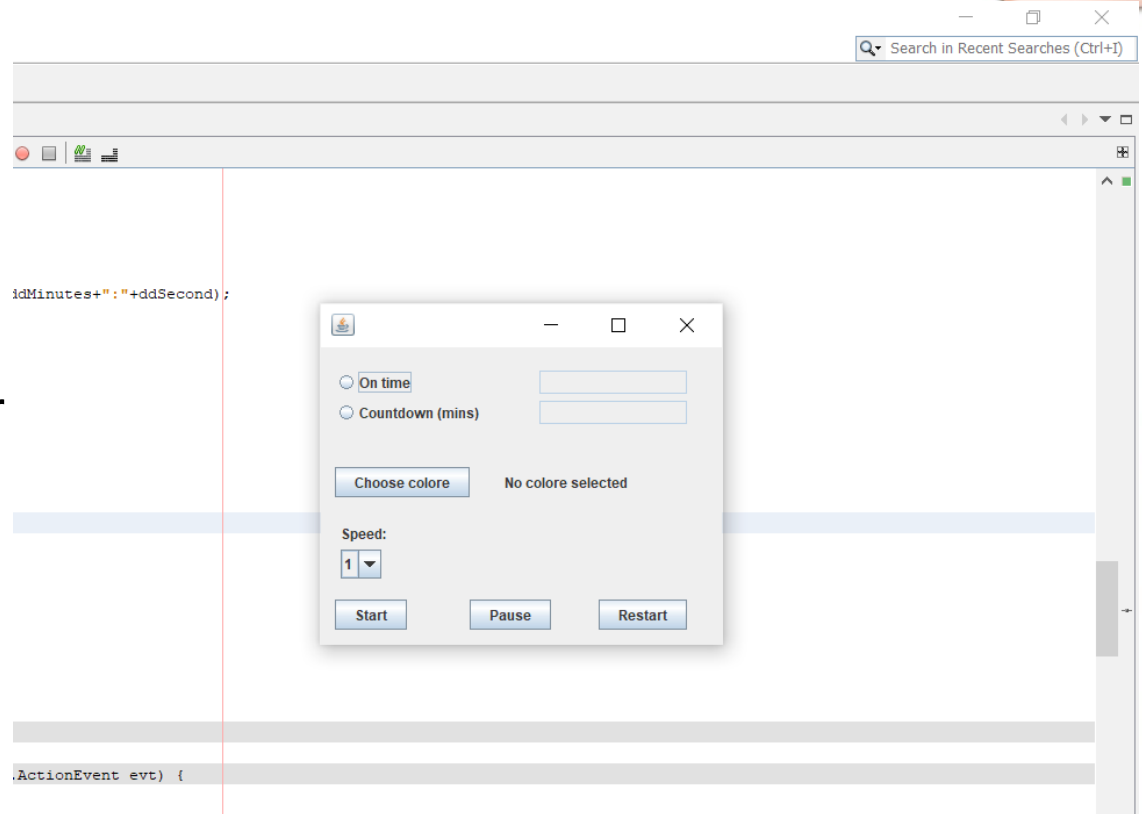

- Settings – open settings for timer
- Close – exit app

Step 2

Timer setting

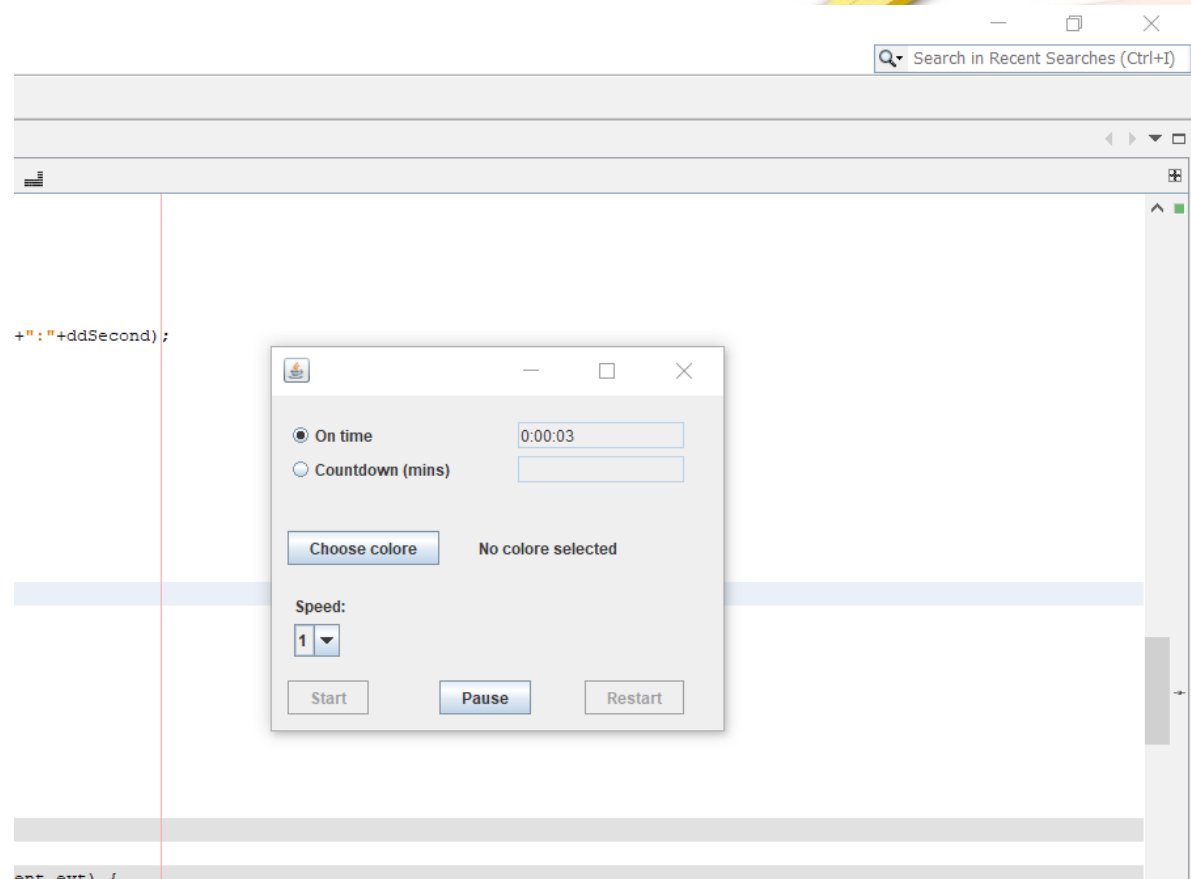

- On time – we select stopwatch
- Countdown – we select timer
- We can select color for popup as well

On Time

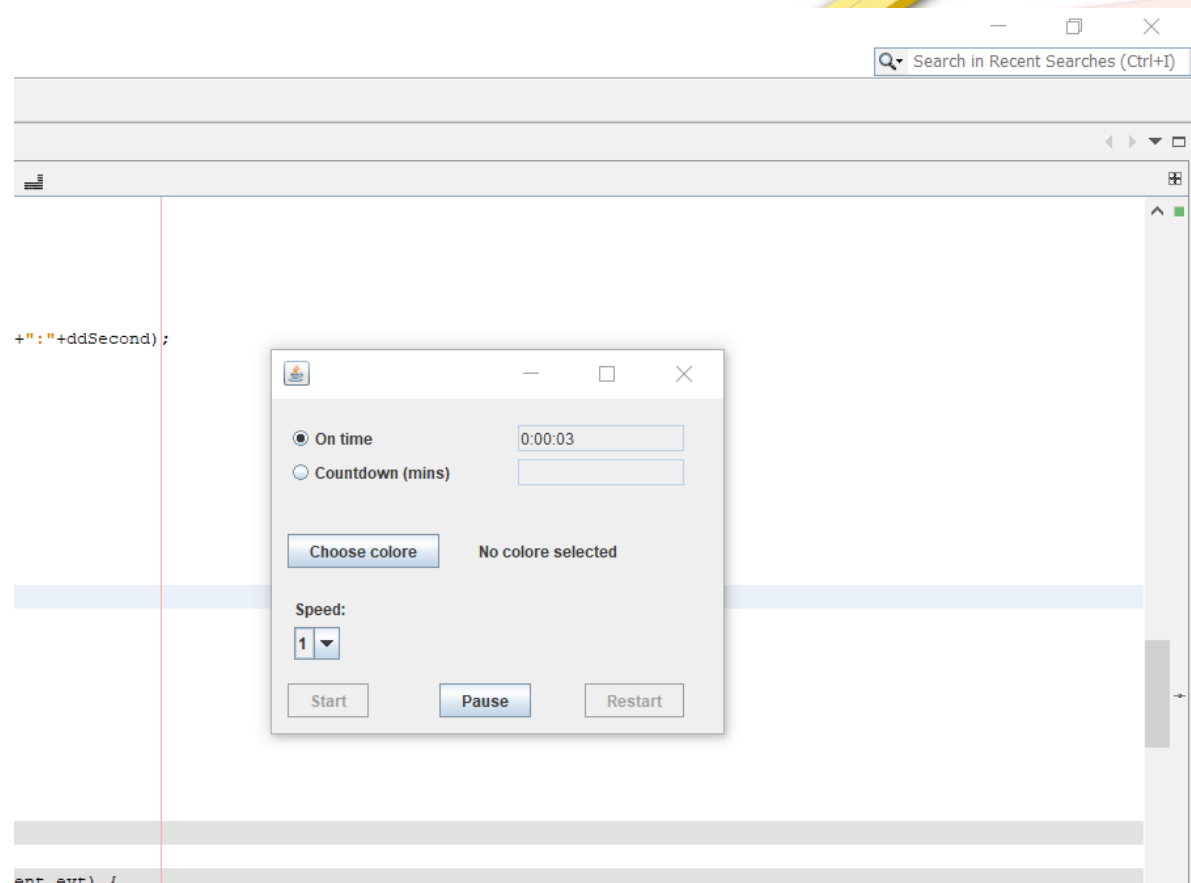

If we chose On Time, and press start, we will start stopwatch and can see time next to it.

On pause we can pause stopwatch, and then start and reset buttons will be enabled. With start we continue counting, and with restart, we reset stopwatch

Countdown

If we chose Countdown, field next to it will be enabled, and there we can input time in minutes for timer. As well as stopwatch we got start, pause and restart buttons.

Color

On Choose colore button, pallet of colors will pop up, and we can chose any color.

That color will show up as pop up when we start timer or stopwatch
